

## Access Control Solution KT-ACS

### Product Features

- Face enrollment and encryption (Identified personnel)
- Infra-red based fake face blocking (Live Face Detection)
- High quality face image logs
- Face matching against identified and enrolled face database
- Remove face from face database

### Customized system architecture

KT-ACS is an open, web-based security platform that offers extensive access control capabilities. Its modular and adaptable framework allows for system customization based on the scale of the system, the number of users, and the utilized system structure.

Our offering with KT-ACS includes a tailored system that accommodates two distinct access control system structures within a single platform.
